

Environmental Management Policy

GlobalWafers is a global leader in semiconductor wafer manufacturing technologies, continuously providing high-quality semiconductor wafer materials, which are utilized in the world's most advanced smart devices, to meet the needs of semiconductor manufacturers. In recent years, global climate change has significantly impacted the operational activities across the upstream and downstream value chains of our industry. GlobalWafers deeply recognizes the interdependence and the positive interactions between corporate operations and the environment. To fulfill the corporate social responsibility as a global citizen, GlobalWafers upholds a mission and vision of sustainable development, being dedicated to minimizing the environmental impact of operations and fostering environmentally friendly green manufacturing to drive economic, social, and environmental progress.

We are committed to:

- 1. Supporting the Paris Agreement and aligning with the United Nations 2030 Sustainable Development Goals (SDGs).**
- 2. Achieving 100% renewable energy usage and promoting net-zero emissions.**
- 3. Complying with international and national environmental laws and regulations, and adhering to other applicable requirements.**
- 4. Committing to environmental protection, climate change mitigation and adaptation, resource conservation, pollution reduction, and a sustainable environment.**
- 5. Establishing a management system and implementing control technologies and preventive measures by identifying and assessing the environmental impact of operational activities at different stages of the product life cycle. This ensures that all operational sites effectively manage energy and resources, reducing environmental impact, and continuously monitor and improve their performance.**
- 6. Enhancing employee engagement and communication, and continuously strengthening stakeholders' awareness and capacity for environmental sustainability.**
- 7. Ensuring environmental information is transparent and easily accessible to stakeholders.**
- 8. Collaborating with value chain partners to promote a low-carbon value chain.**
